

Unlimited Realities Announces New Fingertapps Applications

- **Unlimited Realities announces its new range of Fingertapps applications for All-in-One Touchscreen PCs**
- **Unlimited Realities announces 10 touch support for its Fingertapps application suite**
- **Unlimited Realities announces DX11 support for its Fingertapps application suite**

WELLINGTON, NEW ZEALAND – September 9th, 2011 – Leading touchscreen software developer Unlimited Realities today announced the launch of a range of new and updated applications in its multi-touch Fingertapps application suite.

New to the suite are children’s applications including jigsaws, onscreen painting and basic numeracy. In addition, the company has introduced a new touch-optimized YouTube viewer along with significant updates to the popular Fingertapps musical instruments application and touch games.

In support of its OEM partners, Unlimited Realities has enabled up to 10 simultaneous touches on projected-capacitive (pro-cap) screens, in addition to continued support for optical multi-touch screens, including those by leading manufacturer, NextWindow Ltd.

“It’s exciting to see All-in-One PCs start to utilize touchscreen technology that supports more than two touch points simultaneously. Supporting this evolving technology early, means our OEM partners can bring the new technology to market quickly,” says Ben Wilde, VP of Marketing and Business Development at Unlimited Realities.

Unlimited Realities has also extended its leadership in user experience software by announcing its Fingertapps applications will include optimizations for the next generation of computer graphics processing units (GPU).

“Our ability to translate advances in computer processor technology into more engaging end user applications and user experiences is key to our success. Our new range of Fingertapps applications, for example, showcase how DX11 can bring to the PC user, a whole new level of visual experience and performance,” says Mr Wilde.

ABOUT UNLIMITED REALITIES

Founded in 1996, Unlimited Realities has a proven track record in software innovation, product development and support. Using their market-leading expertise in user experience design and development the Fingertapps apps have been developed to meet the growing demand for software that is optimized for Win7 consumer touch devices, including tablets, net books and All-in-One PCs. Unlimited Realities work with partners across the PC industry to translate technological advances into best-in-class user experience.
